

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

1. (currently amended) A method for ordering digital image goods and/or services by a user over a communication network, comprising the steps of:
- a. said user obtaining a low-resolution digital image file, a high-resolution digital image file, and associated meta data of an image;
 - b. transmitting said low resolution digital image file and said associated meta data which contains information about the high-resolution digital image file by said user to a server at a remote image photoservice provider over said communication network, said server having software for manipulating and/or for ordering of goods and/or services by said user with respect to said image;
 - c. said user using said software with respect to said image;
 - d. said service provider providing feed back to said user based on said meta data and/or said user using said software; and
 - e. said user transmitting the high-resolution digital image file after using said software.
2. (original) A method according to claim 1 wherein said communication network comprises the internet.
3. (original) A met according to claim 1 wherein said using said software comprises viewing of said image on a display device using said low resolution digital image file.
4. (original) A method according to claim 3 wherein said using said software further comprises manipulating of said image.
5. (original) A method according to claim 3 wherein said using said software comprises placing an order for goods and/or services with respect to said image.

6. (original) A method according to claim 1 wherein said remote image photoservice provider comprises a photofinisher.

7. (original) A method according to claim 5 wherein said remote image photoservice provider fulfills said order.

8. Cancelled

9. Cancelled

10. (original) A method according to claim 1 wherein said transmission of high resolution may be interrupted and resumed at the same place where the transmission was interrupted.

C 11. (currently amended) A method for ordering digital image goods and/or services by a user over a communication network with respect to an image provided in a low resolution digital file and a high resolution digital image file, said image also having associated meta data which contains information about the high-resolution digital image file, comprising the steps of:

a. said user transmitting said low resolution digital image file and said associated meta data by a user to a server at a remote image service provider over said communication network, said server having software for manipulating and/or for ordering of goods and/or services by said user with respect to said image;

b. said user using said software with respect to said image

c. said service provider providing feed back to said user based on said meta data and/or said user using said software; and

d. said user transmitting the high resolution digital image file after said user is finished using said software.

12. (original) A method according to claim 11 wherein said communication network comprise the internet.

13. (original) A method according to claim 12 wherein said using said software comprises viewing of said image using on a display device using said low resolution digital image file

14. (original) A method according to claim 13 wherein said using said software further comprises manipulating of said image.

15. (original) A method according to claim 13 wherein said using said software comprises placing of an order for goods and/or services with respect to said image.

16. (original) A method according to claim 11 wherein said remote image service provider comprises a photofinisher.

17. (original) A method according to claim 15 wherein said remote image service provider fulfills said order

18. Cancelled

19. Cancelled

20. (original) A method according to claim 11 wherein said transmission of high resolution may be interrupted and resumed at the same place where the transmission was interrupted

21. (currently amended) A method for ordering digital image goods and/or services by a user over a communication network with respect to an image provided as a low resolution digital file and a high resolution digital image file, said image also having associated meta data which contains information about the high-resolution digital image file, comprising the steps of:

a. said user transmitting said low resolution digital image file and said meta data to a server at a remote image service provider over a communication network;

- b. said user manipulating said image and/or ordering of goods and/or services with respect to said image;
- c. said service provider providing feed back to said user based on said meta data and/or said user using said software; and
- d. after completing step c said user transmitting said high resolution digital image file to said server.

22. (original) A method according to claim 21 wherein said communication network comprises the internet.

23. (original) A method according to claim 21 wherein said using said software comprises viewing of said image on a display device using said low resolution digital image file.

24. (original) A method according to claim 23 wherein said using said software further comprises manipulating of said image.

25. (original) A method according to claim 23 wherein said using said software comprises placing an order for goods and/or services with respect to said image.

26. (original) A method according to claim 21 wherein said remote image photoservice provider comprises a photofinisher.

27. (original) A method according to claim 25 wherein said remote image photoservice provider fulfills said order.

28. Cancelled

29. Cancelled

30. (original) A method according to claim 21 wherein said transmission of high resolution may be interrupted and resumed at the same place where the transmission was interrupted.

31. Cancelled

32. Cancelled

33. Cancelled

34. Cancelled

35. Cancelled

36. Cancelled

37. Cancelled

38. Cancelled

39. Cancelled

40 (currently amended) A system for manipulating and order of goods and/or services with respect to images provided in a digital format over a communication network, comprising:

an image provider having server capable of being connected to a remote user computer over a communication network, said server allowing the receiving of a high resolution digital image file, a low resolution digital image file, and associated meta data of an image from said remote user computer, said meta data containing information about the high-resolution image file, said server having software for manipulating and/or for ordering of goods and/or services by said user on said remote user computer with respect to said image, said user using said software with respect to said image, said service provider providing feed back to said user based on said meta data and/or said user using said software prior to receiving said high resolution digital image file.

41. (previously added) A system according to claim 40 wherein said high resolution digital image file, low resolution digital image file and associated meta data is received from a digital device.

42. (previously added) A system according to claim 41 wherein said digital device comprises a scanner for capturing a high resolution digital image file of said image.

43. (previously added) A system according to claim 41 wherein said digital device comprises a digital memory device having a high resolution digital image file of said image.

44. (previously added) A system according to claim 41 wherein said digital device comprises a camera memory device having a high resolution digital image file of said image.

45. (previously added) A system according to claim 41 wherein said digital device comprises a CD having a high resolution digital image file of said image.

46. (previously added) A system according to claim 41 wherein said digital device comprises a computer memory storage disc having a high resolution digital image file of said image.

47. (previously added) A system according to claim 41 wherein said low resolution digital image file comprises an digital image having a resolution no greater than about 200 pixels by 150 pixels.

48. (previously added) A system according to claim 41 wherein said high resolution digital image file comprises an digital image file having a resolution no less than about 780 pixels by 560 pixels.

49. (previously added) A system according to claim 41 wherein said low resolution digital image file is no greater than about 50% of the high resolution digital image file.

50. (currently Amended) A method for ordering digital image goods and/or services by a user from a remote service provider over a communication network with respect to an image provided as a low resolution digital file and a high resolution digital image file, said image captured by a user and having associated meta data, said meta data containing information about the high-resolution image file, comprising the steps of:

- a. said remote image service provider receiving said low resolution digital image file and said meta data of said image from said user said communication network;
- b. said server allowing said user to manipulating said image and/or ordering of goods and/or services with respect to said image over a communication network;
- c. said service provider providing feed back to said user based on said meta data and/or said user using said software; and
- d. said service provider obtaining said high resolution digital image file after completing step c.

51. (previously added) A method according to claim 50 wherein said communication network comprises the internet.

52. (previously added) A method according to claim 50 wherein said using said software comprises viewing of said image on a display device using said low resolution digital image file.

53. (previously added) A method according to claim 52 wherein said using said software further comprises manipulating of said image.

54. (previously added) A method according to claim 52 wherein said using said software comprises placing an order for goods and/or services with respect to said image.

55. (previously added) A method according to claim 50 wherein said remote image photoservice provider comprises a photofinisher.

56. (previously added) A method according to claim 55 wherein said remote image photoservice provider fulfills said order.

57. (previously added) A method according to claim 1 wherein said meta data comprises information about the image files.

58. (previously added) A method according to claim 1 wherein said feed back comprises information regarding customizing processing that can be preformed.

59. (previously added) A method according to claim 1 wherein said feed back comprises a warning the image data available is insufficient to produce an expected quality level for a requested product or service.

60. (previously added) A method according to claim 50 wherein said meta data comprises information about the image files.

61. (previously added) A method according to claim 50 wherein said feed back comprises information regarding customizing processing that can be preformed.

62. (previously added) A method according to claim 50 wherein said feed back comprises a warning the image data available is insufficient to produce an expected quality level for a requested product or service.

63. (previously added) A method according to claim 50 wherein said feed back comprises a statement that the image can benefit from image enhancement.

64. (previously added) A method according to claim 50 wherein said feed back comprises said images are not suitable for a requested operation.

65. (previously added) A method according to claim 1 wherein said feed back comprises a statement that the image can benefit from image enhancement.

66. (previously added) A method according to claim 1 wherein said feed back comprises said images are not suitable for a requested operation.

67. (previously added) A method according to claim 1 wherein said meta data comprises information about the image files.

68. (previously added) A method according to claim 11 wherein said feed back comprises information regarding customizing processing that can be preformed.

69. (previously added) A method according to claim 11 wherein said feed back comprises a warning the image data available is insufficient to produce an expected quality level for a requested product or service.

70. (previously added) A method according to claim 11 wherein said feed back comprises a statement that the image can benefit from image enhancement.

71. (previously added) A method according to claim 11 wherein said feed back comprises said images are not suitable for a requested operation.

72. (previously added) A method according to claim 21 wherein said meta data comprises information about the image files.

73. (previously added) A method according to claim 21 wherein said feed back comprises information regarding customizing processing that can be preformed.

74. (previously added) A method according to claim 21 wherein said feed back comprises a warning the image data available is insufficient to produce an expected quality level for a requested product or service.

75. (previously added) A method according to claim 21 wherein said feed back comprises a statement that the image can benefit from image enhancement.

76. (previously added) A method according to claim 21 wherein said feed back comprises said images are not suitable for a requested operation.
